

Simple Launcher

Information

This is a simple, easy to style Launcher, that requires very little system resources.

It supports drag and drop.

The program isn't foolproof so unintended behavior can be expected.

The program was written in C# 2019 Community edition with .Net Framework 4.5 target platform.

Made by: Kurtis

System requirements

At least .Net Framework 4.5 is required to run this program.

The system requirement mostly depends on the style settings.

Minimal requirements

10-20 MB free memory

1.0 GHz processor

Install

Extract these files into a folder:

- sm_launcher.exe
- sm_launcher_cfg.exe

Uninstall

Delete these files or the folder where you extracted them:

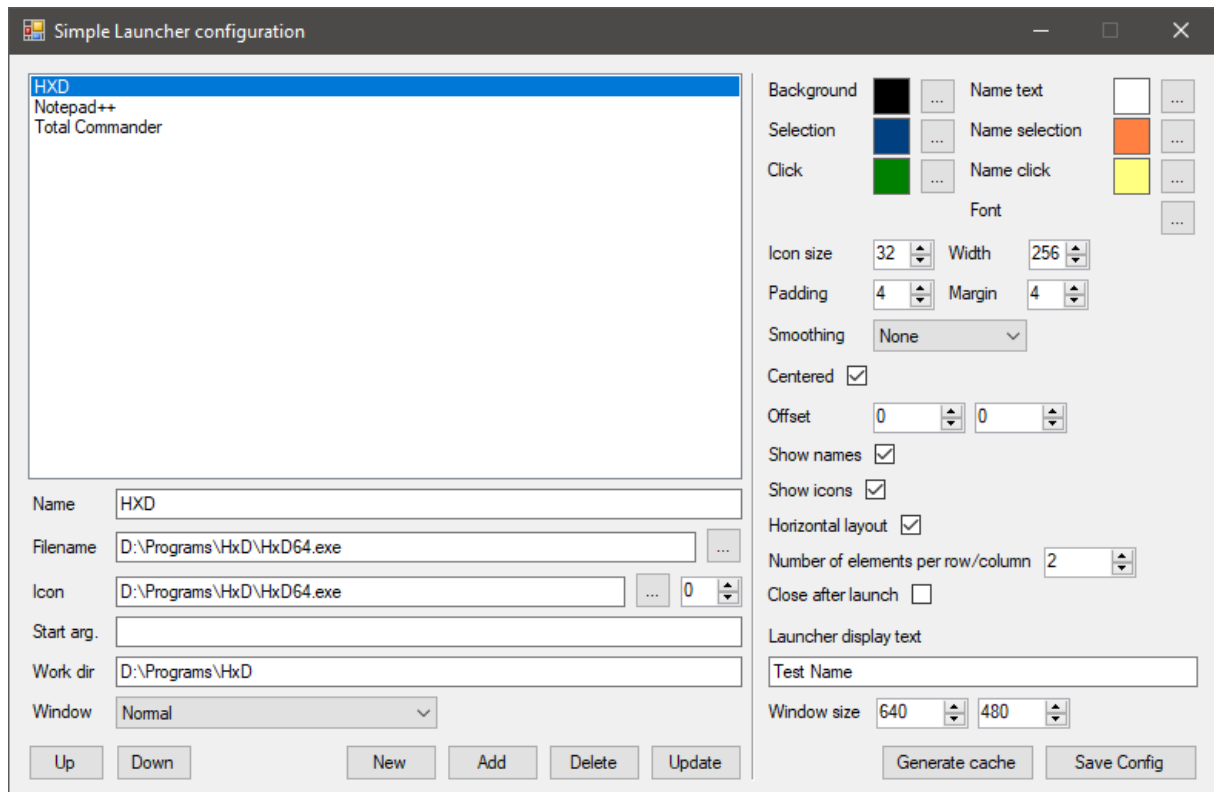

- icons.img
- sm_launcher.exe
- sm_launcher_cfg.exe
- sm_launcher.ini

Usage

Before anything you must configure the Launcher with the **sm_launcher_cfg.exe** file, because the required files are missing:

- icons.img
- sm_launcher.ini

Simple Launcher configuration – sm_launcher_cfg.exe

New	Empty the text fields

After you have finished with the settings press the **Save Config** button, if there are no errors then press the **Generate cache** button – the next time you will need to use this button when you add or update the list. After that if everything completed without errors you can start the **sm_launcher.exe** file.

Simple launcher – sm_launcher.exe

If you don't like what you have set, close it, then with the configurator fine-tune your settings until you are satisfied.
